Abstract
Provides an overview of the functionality of the Qualitative Research Analysis software, QSR Nvivo7.
Describes how one researcher is using the program to analyze articles for a PhD literature review. This is NOT a ‘how-to’ session on learning to use the software, but an enthusiastic demonstration of the program’s powerful capability.
See how and why excitement for a project is being maintained, by being able to organise documents, tie ideas together, capture emerging thoughts and to report, query and present data in new and interesting ways, whilst not being overwhelmed by mountains of paper.
With plenty of Question Time at the end for those who want to know more!
